AVO100-48S1V8

72 Watts

Eighth-brick Converter

Total Power: 72 Watts
Input Voltage: 36 to 75 Vdc
# of Outputs: Single

Special Features

- Delivering up to 40A output
- Ultra-high efficiency 91.3% typ. at half load
- Wide input range: 36V ~ 75V
- Excellent thermal performance
- No minimum load requirement
- Intended for reflow or wave soldering
- RoHS 6 compliant
- Remote control function
- Remote output sense
- Trim function: 80% ~ 110%
- Input under voltage lockout
- Output over current protection
- Output over voltage protection
- Over temperature protection
- Industry standard eighth-brick pin-out outline
- Pin length option:3.8mm

Safety

IEC/EN/UL/ 60950-1
CE Mark
UL/TUV
GB4943

Product Descriptions

The AVO100-48S1V8 is a single output DC/DC converter with standard eighth-brick form factor and pin configuration. It delivers up to 40A output current with 1.8V output. Ultra-high 91.3% efficiency and excellent thermal performance makes it an ideal choice for use in datacom and telecommunication applications and can operate over an ambient temperature range of -40 ^{O}C ~ +85 ^{O}C.

Applications

Telecom/ Datacom

Absolute Maximum Ratings

Stress in excess of those listed in the "Absolute Maximum Ratings" may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply's reliability.

Table 1. Absolute Maximum Ratings:

Parameter	Model	Symbol	Min	Typ	Max	Unit
Input Voltage						
Operating -Continuous	All	$V_{IN,DC}$	-	-	80	Vdc
Non-operating -100mS	All		-	-	100	Vdc

Environmental Specifications

EMC Immunity

AVO100-48S1V8 power supply is designed to meet the following EMC immunity specifications:

Table 4. Environmental Specifications:

Document	Description	Criteria
EN55022, Class A Limits	Conducted and Radiated EMI Limits	/
IEC/EN 61000-4-2, Level 3	Electromagnetic Compatibility (EMC) - Testing and measurement techniques - Electrostatic discharge immunity test. Enclosure Port	B
IEC/EN 61000-4-6, Level 2	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Continuous Conducted Interference. DC input port	A
IEC/EN 61000-4-4, Level3	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Electrical Fast Transient. DC input port.	B
IEC/EN 61000-4-5	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Immunity to surges - 600V common mode and 600V differential mode for DC ports	B
EN61000-4-29	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Voltage Dips and short interruptions and voltage variations. DC input port	B

Criterion A: Normal performance during and after test.

Criterion B: For EFT and surges, low-voltage protection or reset is not allowed. Temporary output voltage fluctuation ceases after disturbances ceases, and from which the EUT recovers its normal performance automatically. For Dips and ESD, output voltage fluctuation or reset is allowed during the test, but recovers to its normal performance automatically after the disturbance ceases.

Recommend EMC Filter Configuration

See Figure 17

Safety Certifications

The AVO100-48S1V8 power supply is intended for inclusion in other equipment and the installer must ensure that it is in compliance with all the requirements of the end application. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

Table 5. Safety Certifications for AVO100-48S1V8 power supply system

Document	File #	Description
UL/CSA 60950		US and Canada Requirements
EN60950		European Requirements
IEC60950		International Requirements
GB4943		China Requirements
CE		CE Marking

Operating Temperature

The AVO100 series power supplies will start and operate within stated specifications at an ambient temperature from -40 ^{O}C to 85 ^{O}C under all load conditions. The storage temperature is -55 ^{O}C to 125 ^{O}C.

Thermal Considerations – Open-Frame module

The converter is designed to operate in different thermal environments and sufficient cooling must be provided. Proper cooling can be verified by measuring the temperature at the test points as shown in the Figure 12. The temperature at these test points should not exceed the maximum values in Table 6.

For a typical application, forced airflow direction is from Vin- to Vin+, Figure 13 shows the derating of output current vs. ambient air temperature at different air velocity.

.

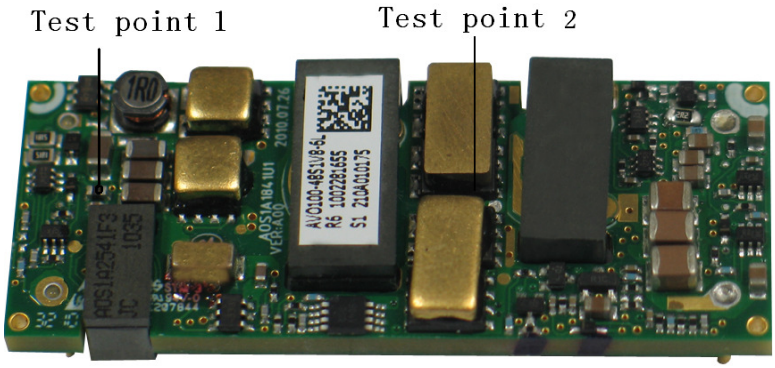

Figure 12 Temperature test point

Table 6. Temperature limit of the test point

Test Point	Temperature Limit
Test point 1	114 ^{O}C
Test point 2	130 ^{O}C

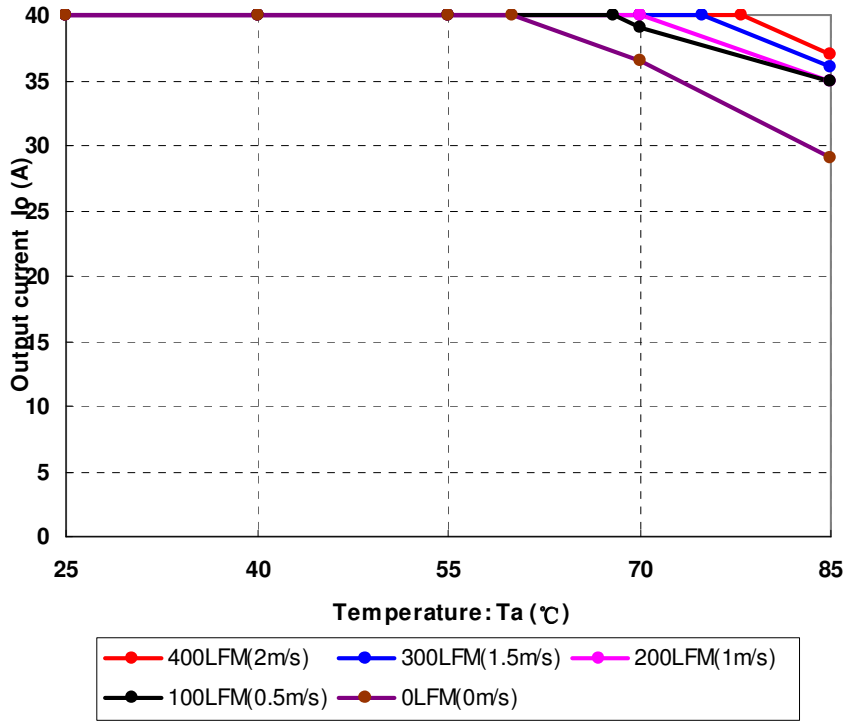

Figure 13 Output power derating, 48Vin, air flowing across the converter from Vin- and Vin+

Thermal Considerations –Baseplate module

The converter is designed to operate in different thermal environments and sufficient cooling must be provided. Proper cooling can be verified by measuring the temperature at the test points. The temperature at these points should not exceed the maximum values in Table 7.

For a typical application, forced airflow direction is from Vin- to Vin+, Figure 16 shows the derating of output current vs. ambient air temperature at different air velocity.

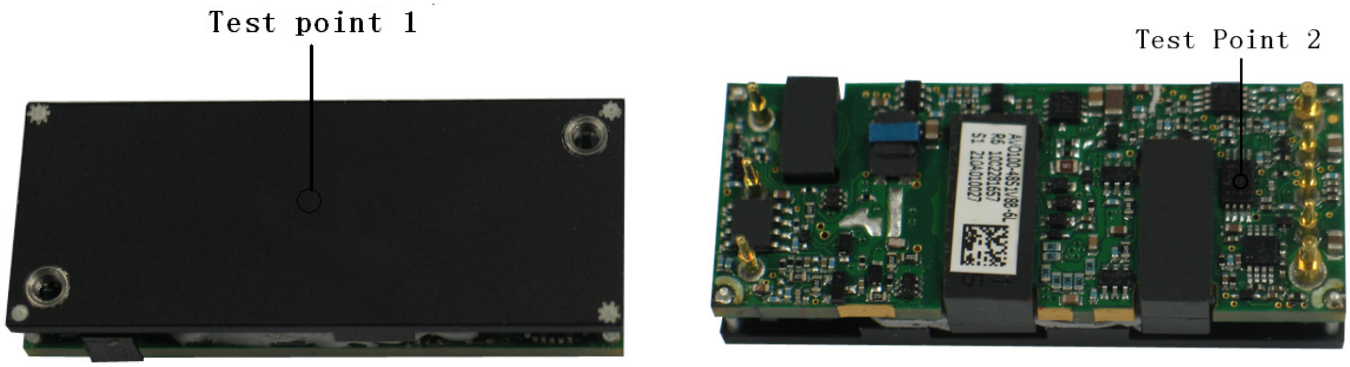

Figure 14 Temperature test point

Table 7. Temperature limit of the test point

Test Point	Temperature Limit
Test point 1	112 ^{O}C
Test point 2	114 ^{O}C

The converter can also operate with a smaller heatsink and sufficient airflow. The heatsink is shown in Figure 15.

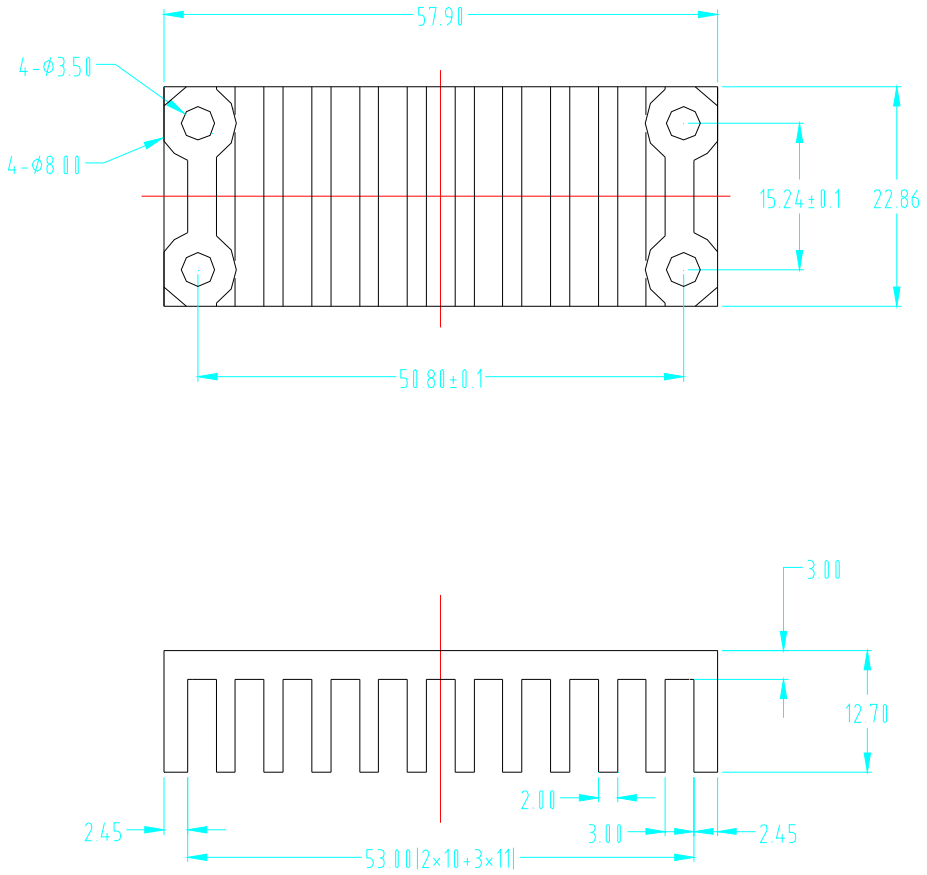

Figure 15 Heatsink (Unit:mm)

.

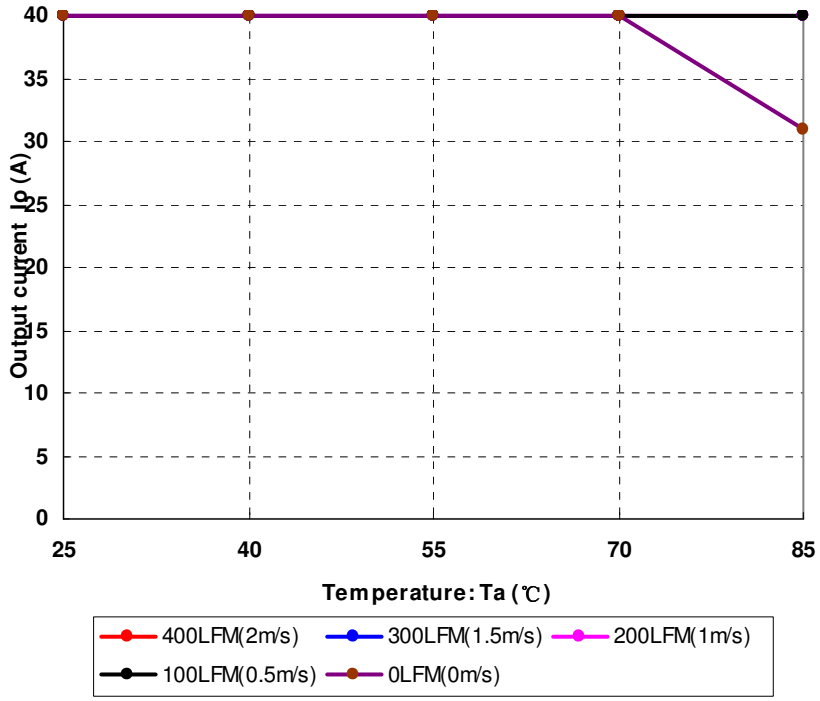

Figure 16 Output power derating, 48Vin, air flowing across the converter from Vin- and Vin+

Assembly

The maximum length of the screw driven into heat-sink is 3.3mm.

Qualification Testing

Parameter	Unit (pcs)	Test condition
Halt test	4-5	$T_{a,min}$-10 ^{O}C to $T_{a,max}$+10 ^{O}C, 5 ^{O}C step, V_{in} = min to max, 0 ~ 105% load
Vibration	3	Frequency range: 5Hz ~ 20Hz, 20Hz ~ 200Hz, A.S.D: 1.0m^2/s^3, -3db/oct, axes of vibration: X/Y/Z. Time: 30min/axis
Mechanical Shock	3	30g, 6ms, 3axes, 6directions, 3time/direction
Thermal Shock	3	-40 ^{O}C to 100 ^{O}C, unit temperature 20cycles
Thermal Cycling	3	-40 ^{O}C to 55 ^{O}C, temperature change rate: 1^{O}C/min, cycles: 2cycles
Humidity	3	40 ^{O}C, 95%RH, 48h
Solder Ability	15	IPC J-STD-002C-2007

Application Notes

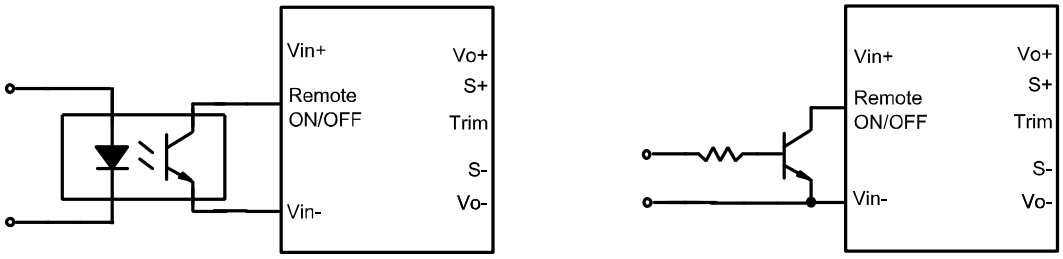
.

Remote ON/OFF

Either positive or negative remote ON/OFF logic is available in AVO100-48S1V8. The logic is CMOS and TTL compatible. The voltage between pin Remote ON/OFF and pin Vin- must not exceed the range listed in Table 3 to ensure proper operation. The external Remote ON/OFF circuit in AVO100-48S1V8 is highly recommended as shown in Figure 18.



Isolated remote ON/OFF circuit

Non-isolated remote ON/OFF circuit

Figure 18 External Remote ON/OFF circuit

Trim Characteristics

Connecting an external resistor between Trim pin and Vo- pin will decrease the output voltage. While connecting it between Trim and Vo+ will increase the output voltage. The following equations determine the external resistance to obtain the trimmed output voltage.

$$R_{adj\_down} = (\frac{511}{\Delta\%} - 10.22)k\Omega$$

$$R_{adj\_up} = (\frac{5.11 V_{out}(100+\Delta\%)}{V_{ref}\ \Delta\%} - \frac{511}{\Delta\%} - 10.22)k\Omega$$

R_{adj_down}

Value of external adjustment resistor which shall be connected between Trim and S- for trimming down

R_{adj_up}

Value of external adjustment resistor which shall be connected between Trim and S+ for trimming up.

$\Delta\%$

Output voltage change rate against nominal output voltage.

V_{out}: Nominal output voltage.

V_{ref} =1.225V

When trimming up, the output current should be decreased accordingly so as not to exceed the maximum output power as shown in below figure.

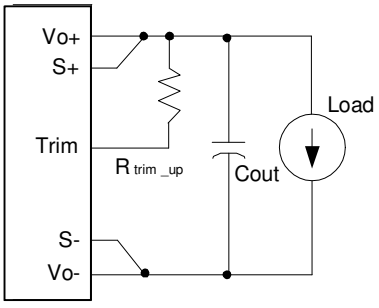


Figure 19 Trim up

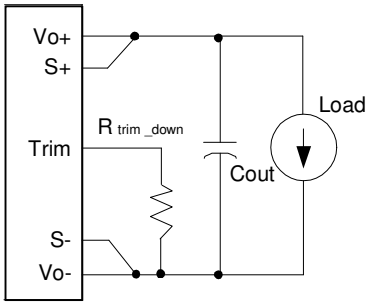

Figure 20 Trim down

Input Ripple & Inrush Current and Output Ripple & Noise Test Configuration

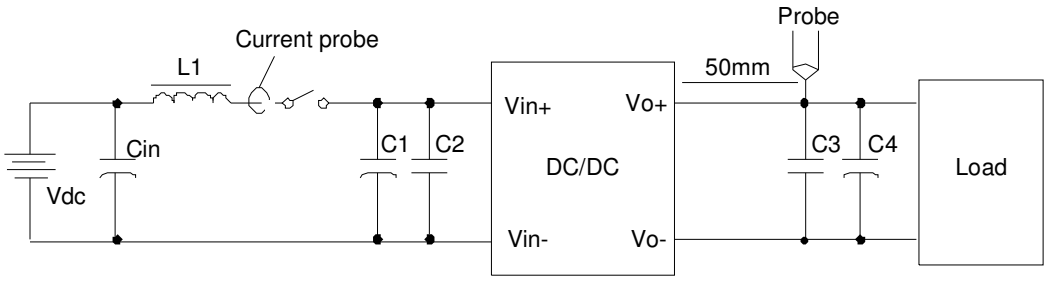

Figure 21 Input ripple & inrush current ,output ripple & noise test configuration

Vdc: DC power supply

L1: 12uH

Cin: 220uF/100V typical
C1: SMD ceramic-100V-100nF-±10%-X7R-1206
C2: 100μF/100V electrolytic capacitor, high frequency and low ESR
C3: SMD ceramic-10V-1μF-±10%-X7R-1206
C4: 1000μF/10V electrolytic capacitor, high frequency and low ESR

Note - Using a coaxial cable with series 50ohm resistor and 0.68uF ceramic capacitor or a ground ring of probe to test output ripple & noise is recommended

Sense Characteristics

If the load is far from the unit, connect S+ and S- to the terminal of the load respectively to compensate the voltage drop on the transmission line.

If the sense compensate function is not necessary, connect S+ to Vo+ and S- to Vo- directly.

Soldering

√R6 Wave Soldering

The product is intended for standard manual, or wave soldering.

When wave soldering is used, the temperature on pins is specified to maximum 260 ^{O}C for maximum 7s.

When soldering by hand, the iron temperature should be maintained at 300 ^{O}C ~ 380 ^{O}C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter.

Cleaning of solder joint can be performed with cleaning solvent IPA or simulative.

	Product requirement	Remark	Product Name
R6	Wave soldering	1.8V	AVO200-48S1V8B

√R6 Reflow/Wave Soldering

The product is intended for standard manual, reflow or wave soldering.

When reflow soldering is used, the temperature on pins is specified to maximum 260 ^{O}C for maximum 10s.

When wave soldering is used, the temperature on pins is specified to maximum 260 ^{O}C for maximum 7s.

When soldering by hand, the iron temperature should be maintained at 300 ^{O}C ~ 380 ^{O}C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter.

Cleaning of solder joint can be performed with cleaning solvent IPA or similative.

	Product requirement	Remark	Product Name
R6	Wave soldering	1.8V	AVO200-48S1V8

Hazardous Substances Announcement (RoHS of China R6)

Parts	Hazardous Substances					
	Pb	Hg	Cd	Cr^{6+}	PBB	PBDE
AVO100-48S1V8	x	x	x	x	x	x
AVO100-48S1V8B	x	x	x	x	x	x

x: Means the content of the hazardous substances in all the average quality materials of the part is within the limits specified in SJ/T-11363-2006

√: Means the content of the hazardous substances in at least one of the average quality materials of the part is outside the limits specified in SJ/T11363-2006

Artesyn Embedded Technologies has been committed to the design and manufacturing of environment-friendly products. It will reduce and eventually eliminate the hazardous substances in the products through unremitting efforts in research. However, limited by the current technical level, the following parts still contain hazardous substances due to the lack of reliable substitute or mature solution:

1. Solders (including high-temperature solder in parts) contain plumbum.
2. Glass of electric parts contains plumbum.
3. Copper alloy of pins contains plumbum
