1 Introduction

1.1   Overview :

The **PX-xxG7Me MLC** series mSATA 6 Gb/s Solid State Drive (mSATA SSD) delivers leading performance in an industry standard JEDEC MO-300 form factor while simultaneously improving system responsiveness for mobile applications over standard rotating drive media or hard disk drives. By combining leading NAND flash memory technology with our innovative high performance firmware, LITEON IT delivers a SSD for native Serial Advanced Technology Attachment (SATA) hard disk drive drop-in replacement with enhanced performance, reliability, ruggedness and power savings. Since there are no rotating platters, moving heads, fragile actuators, or unnecessary delays due to spin-up time or positional seek time that can slow down the storage subsystem, significant I/O and throughput performance improvement is achieved as compared to rotating media or hard disk drives. This document describes the specifications of the **PX-xxG7Me MLC** series mSATA SSD in **JEDEC MO-300** form factors.

The **PX-xxG7Me mSATA** SSD primarily targets mSATA based laptop PCs, highly rugged mobile client devices, as well as thin and light mini/sub-notebooks. Key attributes include high performance, low power, increased system responsiveness, high reliability, and enhanced ruggedness as compared to standard mobile mSATA hard drives. The **PX-xxG7Me mSATA** SSD is available in JEDEC MO-300 form factor that are electrically, mechanically, and software compatible with existing **JEDEC MO-300** Serial ATA slots. Our flexible design allows interchangeability with existing mobile hard drives based on the mSATA interface standard.
